

Kullman, modular manufacturer for more than 77 years, now produces custom stackable steel cells through our Mark Correctional Division. Ideal for new construction or renovations, lightweight steel cells can eliminate the need for heavy foundations.

Our anti-corrosive galvanized steel product, finished with a polymer paint, is non-porous and scratch resistant. Our cells are acoustically and thermally insulated, providing a quiet, passive and hygienic environment with valuable energy savings.

At Kullman, we specialize in modular building solutions that satisfy the most demanding project timelines. Ideal for a wide variety of applications, our permanent, customized buildings consistently combine a superior level of quality, style, and sophistication. Markets we service include education, correctional, food service, retail, government, homeland security, communication, and equipment enclosure markets.

To eliminate capital expenditures, or to enhance funding and procurement strategies, we also offer leasing and financing solutions.
